

Newsworthy

Field Inspection Services

Sometimes things just can't wait. In this case, our customer called us with a tight deadline for inspection in the field. There were a lot of moving pieces that needed to fall into the right place as we coordinated with the customer, vendors, and our technicians. The deadline necessitated a weekend project.

The Project – Perform “as found” inspection services for blowout preventers and other drill-through equipment in accordance with API 16A, API 16AR, and ISO 10423 for recertification of monogrammed equipment.

The Inspection Tool – Romer Absolute Arm used for high-end portable measurement applications.

Dupill Group has a large variety of programmed inspection routines for various makes and models of blowout preventers, annulars, spacers, spools, and other equipment. If we don't have a program for your specific equipment, our skilled technicians can create one on the fly.

Another successful project by the Dupill Group.
